Ear Piercing After Care

One of the most important parts of getting your ears pierced is taking care of them. In order to obtain the best results, please follow these essential steps:

Step 1:

Thoroughly cleanse hands with an anti-bacterial soap prior to any contact with your newly pierced ears. **DO NOT** remove the earrings. **DO NOT** handle your ears or earrings unnecessarily.

Step 2:

Cleanse the front and back of your ears with the Ear Care solution pad, provided in your Hay's Hair starter pack, 3 times a day without removing the earrings. With each cleaning gently slide the earrings back and forth in your ear so the solution will go inside the piercing. Then gently rotate the earrings a partial turn, both forward and backwards, 2 or 3 times a day.

Step 3:

For EAR LOBE PIERCING – Leave earrings in your ears for 6 weeks. After 6 weeks, the earrings can be removed and other post type earrings can be inserted. Post earrings must be worn at all times for the first 6 months to ensure that your ear piercing will remain the proper size.

For EAR CARTILAGE PIERCING – Leave earrings in your ears for 12 weeks; the earrings can then be removed and other post type earrings can be inserted. Some type of post earrings must be worn at all times for the first 12 months to ensure that your ear piercing will remain the proper size.
